

The Electro-Creaser from Morgana No.1 in Digital Print Finishing

The semi-automatic Electro-Creaser is the ideal unit for printers who need something faster than a manual creaser - such as the Morgana Docu-Crease - but cannot justify the cost of a fully automated machine like the AutoCreaser.

Made in the UK, the Electro-Creaser is ideal for the smaller printer or inplant. A compact, table-top unit, it is fast to set up and simplicity itself to operate. Like other Morgana products, it employs a genuine blade and matrix action which, unlike scoring, will not cause any damage to the substrate, and will produce a superb crease on all types of stock up to 300 gsm.

It provides 2 creasing widths as standard, - 1.6mm and 1.2mm - with the ability to change from one to another in seconds. It also has a special 'Super Speed' stop system, which greatly simplifies jobs that call for multiple creases. The creasing matrix is electronically activated by a foot switch for increased accuracy and productivity.

Unlike scoring, which can damage card or paper, the Morgana blade and matrix method ensures a clean sharp fold without damage to the substrate.

Specifications

- Height: 225mm
- Width: 420mm
- Length: 700mm
- Weight: 22kg
- Electrical: 230V-240V - also 110V
