

YOUR MORGANA SPECIALIST IN RECONDITIONED EQUIPMENT

Sydney Stone understands that buying pre-owned equipment provides your business with a more affordable option and we currently maintain one of the largest inventories of reconditioned small format finishing equipment in Canada. We are proud of our on-site rebuild center, which allows us to properly assess, clean and fully recondition the equipment back to its factory tolerances. Our technicians are factory trained and spend the time to ensure that you receive a machine that is ready for the rigors of current on-demand production requirements.

Sydney Stone does not stop at the reconditioning process. All machines come with a complete set of accessories, tools and manuals that would have been supplied with a new machine.

WARRANTY

Our pride of workmanship is reflected in the warranty provided on all our reconditioned

machines. With many machines being available through brokers and online auction, our in-stock parts supply and fully trained service staff allows us to stand behind this commitment. This is the protection that buying from Sydney Stone provides.

RECENTLY SOLD MACHINES

Sydney Stone knows that as your business grows, so will your finishing requirements. To ensure that customers have a clear upgrade path to their future finishing needs, Sydney Stone will be pleased to offer a generous trade-in value, or purchase your existing Morgana machine outright. Please visit our website at Printfinishing.com to see our current selection of available reconditioned Morgana Machines.

This 2007 Morgana Major operated in a small in-plant in Montreal and received a complete reconditioning including a new roller kit.
Sold for \$ 6,995.00

This 2005 Morgana AutoCreaser MK II was traded in for the larger AutoCreaser 50 and received a full service and a new dispatch kit.
Sold for \$ 7,995.00

This Morgana ElectroCreaser 52 was traded in for an upgrade to a semi-automatic Morgana Digicreaser. Thoroughly cleaned and tested.
Sold for \$ 1,350.00

MEET THE OWNERS

MORGANA MAJOR FOLDER

"It makes us money! We now fold jobs we used to outsource and we keep the change!"

- Paolo Leone from Print Three
Dixon Location, Toronto, ON

AUTOFOLD PRO & AUTOCREASER 33

"...we fell in love with Morgana's ease of use, quality of the scores and its build."

- Patrick Sin from Creative Path
Richmondhill, ON

AUTOCREASER 33 & AUTOCREASER 50

"...multiple scores in one pass make these machines fast, efficient and reliable."

- Vito Santacroce from Central Reproductions
Mississauga, ON

CREASERS & FOLDERS

MORGANA CREASERS

SYDNEY STONE - GIVING MEANING TO EXPERTISE

Sydney Stone is proud to sell, service and support the full range of Morgana finishing systems. Morgana has established a global reputation as a leader and innovator in the development of systems specifically designed to finish digitally printed output. Breakthrough products like the DocuCrease, AutoCreaser and AutoFold all underline Morgana's claim to be the number one in digital print finishing. Since 1988, Sydney Stone has provided Morgana equipment and service back-up that helps digital printers streamline their finishing operations.

LCD SCREEN
The new intuitive 7" SmartScreen controls all the main functions of the AutoCreaser Pro 33/50.

CREASING MATRIX
Employs a unique creasing rule and matrix which eliminates tearing and cracking.

PERFORATOR
Perforation comes as standard and is available to all applications.

MORGANA AUTOCREASER PRO

The new Morgana AutoCreaser Pro is available in either a 12.9" wide (AutoCreaser Pro 33) or 19.6" wide (AutoCreaser Pro 50) model. The new PRO series now operates up to an astonishing 8,500 sheets per hour. Easy to use, the intuitive 7" touch-screen controls all the main functions. Key-in the sheet length (popular sizes are already pre-set), select the fold type for the finished product (letter, gate, etc) and press the green button. Both AutoCreaser Pros will automatically calculate where the creases are needed and set them accordingly.

MORGANA FOLDERS

CANADA'S #1 SELLING AIR FEED FOLDERS

Sydney Stone launched the Morgana Major folder in 2003 and its impact was immediate as printers recognized the stride forward in folding technology. Gone are the ear splitting noises and trickiness of settings associated with traditional folder designs. Gone are the multitude of wire connections and the countless feet of air hoses. Gone are the need for "add-on" batch counters and sound hoods. In their place is the latest folding technology which is smooth, quiet and controlled. The evolution continues with the introduction of the new Morgana DocuFold Pro with its sophistication, simple operation and capabilities of folding short or long runs on both digital and offset stock.

MORGANA MAJOR

Fully enclosed fold plates with "dial-a-fold" and LED display makes the Major easy to set-up. Powerful pulsed rotary suction drum is superior at feeding digital stocks which contain high amounts of static and curl. Batching and counting along with perforation and scoring are included as standard features.

MORGANA DOCUFOLD PRO

The new DocuFold Pro combines the powerful folding capabilities of the Morgana Major with the latest "SmartScreen" technology; which enables an operator with minimum training to carry out a variety of folds from an icon driven touch-screen. Simply enter the sheet size and fold type on the screen and the machine automatically adjusts the fold plates.

DOCUCREASE 35 & 52

The most popular hand operated creaser on the market. Available in both 14" and 20.5" widths and with a 1.6 mm crease profile, the DocuCrease has the ability to crease substrates as thick as 350 GSM. Adjustable speed stops allow multiple creases on a single sheet to be performed quickly and accurately.

ELECTROCREASER 36 & 52

Available in both 14" and 20.5" widths, this foot pedal operated machine increases the speed of production over a manually operated machine. As an added feature, with the turn of a dial the crease width is adjustable from a 1.2 mm profile crease (for text weight stocks under 150 GSM) to the wider 1.6 mm profile crease for substrates as thick as 350 GSM.

DIGICREASER

Fully automatic after feeding, the hand feed DigiCreaser offers the advantages of a fully automatic creaser, but at a lower price point. The easy to use heads up display allows programming of a creasing job (up to 9 creases on a single sheet) and stores up to 6 programs. Perforation and batch counting are included as standard features.

MORGANA DIGIFOLD PRO & AUTOFOLD PRO

DIGIFOLD PRO

The DigiFold Pro is a fully automatic combination creasing and folding machine, designed specifically for the digital or offset printer who has a need to crease and fold digitally printed, heavy weight or cross grained stock. The DigiFold Pro can be used as: an integrated creaser and folder (performing both functions in a single pass), as a stand alone creaser or as a perforator when creasing and folding are not required. Controlled by the same innovative 7" SmartScreen panel as the rest of PRO range, the DigiFold Pro is instructed how long the sheet is and which crease / fold to produce.

FLYING KNIFE TECHNOLOGY

The DigiFold Pro and AutoFold Pro both use Morgana's patented "flying knife" technology. This allows delicate digital stocks, cross-grained materials and heavy weight stocks to be folded without any of the scratching and marking caused with conventional folders.

AUTOFOLD PRO

The Morgana AutoFold Pro is a free standing folding unit designed for folding digital stocks using Morgana's patented flying knife technology. The AutoFold Pro can simply be wheeled up to any manufacturer's creaser to produce a knife folded, scratch and crack free piece directly in-line. Controlling all the main functions is the same innovative 7" SmartScreen, used on all Pro models. With a 15" x 23.6" sheet size and up to 6,240 sheets per hour, the AutoFold Pro is the perfect addition to improve productivity and quality.
